

Revor Latex is not a hot mattress

Revor Latex has an **open cell structure** of millions of tiny interconnecting micro cells, which allow air and moisture to pass through naturally.

More importantly Revor Latex mattresses are designed with **pin holes top and bottom** and special **ventilation holes** on the side, which allow the mattress to ventilate during our natural nightly movements and unlike most Australian latex mattresses we do not cover (smother!) with layers of polyurethane foam which does not breathe and traps body heat.

From the largest & oldest latex factory in the world

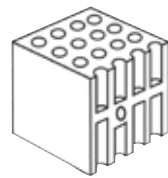

No chinks and no fillers

Optimal spinal and full body support

Anti dustmite, anti bacterial and anti fungal

100% LATEX

Natural and environmentally friendly

Removable and washable cover

The world's best bed from Belgium

latexbedding.com.au

Revor Latex is dust mite free...

Anti-fungal & Anti-bacterial

Tests carried out by the Morton Thiokoi Research and Development Institute in Massachusetts by our supplier indicated that Revor Latex products have an **anti-fungal and bactericide action**.

Latex provides no feeding ground for house dust mites. Revor Latex does not need any chemical treatment, it is **naturally anti-house dust mite and anti-bacteria**.

Revor Latex mattresses are tested for durability

Durability

140kg load is rolled 60,000 cycles over a mattress to simulate a 10 year usage of the mattress.

All Revor mattresses are tested for hardness and height durability. Revor mattresses perform much better than the international ISO requirements (5% loss of height). *We guarantee less than 11mm loss of height for a 22cm mattress for 10 years.*

This means you will not experience sagging and your Revor Latex mattress will keep its outstanding qualities over time.

Revor Latex mattresses have a removable zip-cover

Long lasting

Revor Latex Mattresses have a **removable** and **machine washable** zip cover.

This unique feature guarantees a **longer** and **fresher life** of your **mattress**.
